

Strategy Evaluation Checklist

Criterion	Status	Notes
Believable Core Logic	✓	Accurately explains how betting exchange commission is actually calculated and settled in live markets.
Sustainable Analytical Principles	✓	Identifies the fundamental difference between per-market net winnings deduction vs. end-of-month aggregate deduction.
Mathematically Sound (Commission & P&L)	✓	Quantitatively demonstrates the mathematical error: applying a flat 2% to monthly net profit severely understates the actual 33%+ commission drag on gross winning markets.
Robustness Against Hype / Scam Touting	✓	Forensic exposure of synthetic/paper-traded spreadsheets presented as live trading track records.
Sound Risk Management & Fee Context	✓	Clarifies how exchange commission directly impacts net yield, ROI, and long-term edge sustainability.
Practical Market Understanding	✓	Accurately details Betfair Exchange market settlement rules and P&L statement reporting.

BS Factor Rating: 99 / 100

(100 = Sound, mathematically robust, and achievable; 0 = Totally unbelievable, unsustainable, and guaranteed to fail)

Summary & Score Justification

This video by **GuruBusters** (*'Expert Football Betting' Tried To Fix It... And Failed AGAIN!*) evaluates the mathematical mechanics of exchange commission and demonstrates how amateur tipsters inadvertently expose paper-traded records.

Key Breakdown of the Analysis:

1. Exchange Commission Mechanics:

- On betting exchanges like Betfair, commission (e.g., 2%–5%) is calculated and deducted **on net winnings per individual market/event**, not as a flat fee on an aggregate monthly balance.
- Losses on losing markets cannot offset the commission paid on winning markets.

2. Forensic Proof of Spreadsheet Falsification:

- The tout (*Expert Football Betting*) attempted to rectify his previous error (omitting commission entirely) by applying a flat 2% deduction to his total monthly net profit of 2.9 units (calculating 2.83 units net, claiming commission was negligible).
- GuruBusters recalculates the actual per-market winning commission across every winning trade on the sheet, showing the true deduction was **0.973 points**—eroding **33.5% of the total monthly profit**.
- This provides mathematical proof that the tipster was not executing live money trades on an exchange, as an actual Betfair P&L account statement would have automatically reflected the per-market deduction.

3. High Educational Integrity:

- Contains zero commercial upselling, subscription funnels, or affiliate promotions; provides clear, accurate platform accounting and fee education for retail traders.
